

1 2004, Plaintiffs¹ filed suit against CARB’s executive director to prevent enforcement of the
2 regulations.² In their first amended complaint (“FAC”), filed February 16, 2005, Plaintiffs seek
3 declaratory and injunctive relief on the following claims:

- 4 1. Count I – Preemption under the Energy Policy and Conservation Act of 1975
5 (“EPCA”), 49 U.S.C. §§ 32902-32919, specifically Section 32919(a).
- 6 2. Count II – Preemption under § 209(a) of the Federal Clean Air Act, 42 U.S.C.
7 § 7543(a).
- 8 3. Count III – Preemption under the foreign policy of the United States and the foreign
9 affairs powers of the Federal Government.
- 10 4. Count IV – Violation of the Dormant Commerce Clause of the United States
11 Constitution.
- 12 5. Count V – Violation of the Sherman Act, 15 U.S.C. § 1.

13 On April 13, 2006, Defendant and Defendant-Intervenors (collectively “Defendants”)
14 served their Second Set of Requests for Production of Documents on Plaintiffs. The requests
15 sought documents from General Motors (“GM”), DaimlerChrysler (“DCC”), and Alliance of
16 Automobile Manufacturers (“AAM”) (collectively “Plaintiffs” or “Manufacturers”). The
17 documents Defendants sought concerned the science of global warming, the Manufacturers’
18 knowledge of global warming and its effects, and the Manufacturers’ domestic and foreign
19 affairs with respect to global warming. Plaintiffs served their responses on May 16, 2006,
20 objecting to requests for various reasons. In letters dated June 1, 2006, Defendants requested that
21 the Manufacturers produce the withheld documents. After meeting and conferring to attempt to
22 resolve the disputes, Defendants filed a motion to compel on June 16, 2006. On July 3, 2006, the

24 ¹ Plaintiffs include various vehicle dealers, two manufacturers who supply them, an
25 automobile trade association, and the Tulare County Farm Bureau. The Association of
26 International Automobile Manufacturers has intervened as a Plaintiff.

27 ² Sierra Club, Bluewater Network, Global Exchange, Rainforest Action Network,
28 and Natural Resources Defense Council have intervened as Defendants.

1 parties filed a Joint Statement regarding the disputed requests. After conducting a hearing, the
 2 Magistrate Judge issued an order denying the motion to compel in its entirety on July 7, 2006
 3 (the "Order"). The Magistrate Judge noted that Plaintiffs had "rel[ied] on their objection that the
 4 document[] requests are not relevant to any claim" and did not argue any other objection to the
 5 requests for production. Order 7:19-26. He concluded that none of the requests sought evidence
 6 relevant to claims or defense in this case. On July 24, 2006, Defendants filed a motion for
 7 reconsideration of the Order, which Plaintiffs opposed.

8 LEGAL STANDARDS

9 A. Motion for Reconsideration

10 According to Local Rule 72-303, a district judge upholds a magistrate's ruling on a
 11 referred matter unless it is "clearly erroneous or contrary to law."³ See Fed. R. Civ. P. 72(a); 28
 12 U.S.C. § 636(b)(1)(A). The "clearly erroneous" standard applies only to a magistrate judge's
 13 findings of fact. Concrete Pipe & Prods. v. Constr. Laborers Pension Trust, 508 U.S. 602, 623
 14 (1993). "[R]eview under the 'clearly erroneous' standard is significantly deferential, requiring a
 15 'definite and firm conviction that a mistake has been committed.'" Id. The "contrary to law"
 16 standard, on the other hand, allows independent, plenary review of purely legal determinations by
 17 the magistrate judge. FDIC v. Fidelity & Deposit Co. of Md., 196 F.R.D. 375, 378 (S.D. Cal.
 18 2000); Haines v. Liggett Group, Inc., 975 F.2d 81, 91 (3d Cir. 1992).

21 ³ Defendants urge the court to employ an "abuse of discretion" standard for
 22 reconsideration of the Magistrate Judge's rulings on relevance in the discovery context. They
 23 cite in support three district court opinions that apply that standard. See Geophysical Sys. Corp.
 24 v. Raytheon Co., 117 F.R.D. 646, 647 (C.D. Cal. 1987); Marksman Partners, L.P. v. Chaetal
 25 Pharm. Corp., 1996 U.S. Dist. LEXIS 13870, at *7 (C.D. Cal. Aug. 15, 1996); Forbes v.
 26 Hawaiian Tug & Barge Corp., 125 F.R.D. 505, 507-08 (D. Haw. 1989). Local Rule 72-303
 27 governs the district judge's reconsideration of a magistrate judge's rulings on general pretrial
 28 matters. Local Rule 72-303(f) is clear and provides no exceptions: "The standard that the
 assigned Judge shall use in all such requests is the 'clearly erroneous or contrary to law' standard
 set forth in 28 U.S.C. § 636(b)(1)(A)." Accordingly, the court declines to employ the "abuse of
 discretion" standard Defendants propose.

1 **B. Motion to Compel**

2 On a showing of good cause, the court may order discovery of any matter “relevant to the
3 subject matter involved in the action.” Fed. R. Civ. P. 26(b)(1). At trial, relevant evidence
4 encompasses “evidence having any tendency to make the existence of any fact that is of
5 consequence to the determination of the action more probable or less probable than it would be
6 without the evidence.” Fed. R. Evid. 401. For purposes of pretrial discovery, “[r]elevant
7 information need not be admissible at the trial if the discovery appears reasonably calculated to
8 lead to the discovery of admissible evidence.” *Id.* The Federal Rules authorize broad pretrial
9 discovery “based on the general principle that litigants have a right to ‘every man’s evidence,’
10 and that wide access to relevant facts serves the integrity and fairness of the judicial process by
11 promoting the search for the truth.” *Rivera v. NIBCO, Inc.*, 384 F.3d 822, 824 (9th Cir. 2004).

12 **DISCUSSION**

13 **A. Foreign Affairs and Foreign Policy**

14 The Magistrate Judge held that “defendants did not argue, and it is not obvious, how past
15 knowledge of global warming would be relevant to the preemption under the foreign policy
16 claim.” Order 8:19-20. The Magistrate Judge did not specifically address the merits of requests
17 for foreign policy–related documents other than those regarding past knowledge of global
18 warming. Because the Magistrate Judge has not made findings with respect to these requests, the
19 court will decide them de novo.

20 **1. Documents Relating to FAC Paragraph 9(c) and Count III**

21 Defendants requested certain documents supporting Plaintiffs’ foreign policy preemption
22 claims:

23 **GM REQUEST NO. 28/DCC REQUEST NO. 27/AAM**
24 **REQUEST NO. 26:** All DOCUMENTS relating to YOUR claim
25 in paragraph 9(c) of the First Amended Complaint that “A.B. 1493
26 regulation . . . conflicts with national policy and weakens the
27 diplomatic leverage of the federal government in negotiations on
28 greenhouse gas standards with other nations.” This request for
production of documents includes but is not limited to all
DOCUMENTS relating to YOUR communications with United

1 States government officials with respect to any foreign affairs
2 aspect of the global warming issue.

3 ...

4 **GM REQUEST NO. 29/DCC REQUEST NO. 28/AAM**
5 **REQUEST NO. 27:** All DOCUMENTS relating to YOUR claim
6 in Count III of the First Amended Complaint that the regulation
7 adopted by CARB on September 24, 2004 is preempted by the
8 foreign policy of the United States and the foreign affairs powers
9 of the federal government.

10 Joint Statement 51:1-5, 53:4-8.⁴ Plaintiffs' only objection to these requests is that all documents
11 responsive to these requests are "legal strategy" documents." Opp'n 11:4-7.

12 Under Rule 26(b)(3), "documents and tangible things prepared by a party or his
13 representative in anticipation of litigation," may not be ordered produced unless the party seeking
14 them demonstrates "substantial need [for] the materials' and 'undue hardship [in obtaining] the
15 substantial equivalent of the materials by other means.'" United States v. Torf (In re Grand Jury
16 Subpoena), 357 F.3d 900, 906 (9th Cir. 2003) (quoting Fed. R. Civ. P. 26(b)(3)). At its core, the
17 work-product doctrine protects "the mental processes of an attorney." United States v. Nobles,
18 422 U.S. 225, 239 (1975). Discovery of an attorney's selection and compilation of documents is
19 prohibited to the extent it would reveal "an attorney's legal strategy, his intended lines of proof,
20 his evaluation of the strengths and weaknesses of his case, and the inferences he draws from
21 interviews of witnesses." Sporck v. Peil, 759 F.2d 312, 316 (3rd Cir. 1985), *cert. denied*, 474
22 U.S. 903 (1985); *see, e.g., United States v. TRW Inc.*, 212 F.R.D. 554, 564 (C.D. Cal. 2003)
23 (citing Sporck, 759 F.2d. at 316.).

24 In Sporck, plaintiff sought documents counsel gave to a particular defendant to review
25 prior to his deposition. Id. at 313. The district court had found that the grouping and selection of
26 the documents was not opinion work product and ordered them produced. Id. at 314.

27 Defendants argued that such grouping and selection revealed counsel's legal opinions as to how
28

⁴ Some identical requests are numbered differently with respect to each
Manufacturer. Where this occurs, the numbers are separately listed and divided by slashes.

1 the evidence in the documents related to issues of the case. Id. at 315. The court found that the
2 compilation of documents fell within the category of highly protected information: “In selecting
3 and ordering a few documents out of thousands counsel could not help but reveal important
4 aspects of his understanding of the case.” Id. at 316.

5 Here, Defendants’ requests are broadly worded to seek documents “related to” claims in
6 the FAC. They seek documents concerning how the regulation scheme “conflicts with national
7 policy and weakens the diplomatic leverage of the federal government in negotiations on
8 greenhouse gas standards with other nations” and concerning whether “the regulation adopted by
9 CARB on September 24, 2004 is preempted by the foreign policy of the United States and the
10 foreign affairs powers of the federal government.” Joint Statement 51:1-5, 53:4-8. Undoubtedly,
11 certain documents that fall under this request are privileged, such as attorney notes or
12 communications analyzing the legal merits of these contentions. Defendants clarify that their
13 request does not seek any such documents. Moreover, Defendants do not couch their request for
14 documents in a manner that forces Plaintiffs to disclose their counsel’s mental impressions. In
15 seeking any documents Plaintiffs have obtained concerning these claims, Defendants’ requests do
16 not appear calculated, nor likely, to reveal which documents Plaintiffs intend to use at trial,
17 which documents support or undermine their position, or what inferences counsel has drawn
18 from them. See Sporck, 759 F.2d. at 316. Plaintiffs have failed to demonstrate how, by learning
19 which documents Plaintiffs’ counsel consider “related to” those claims, Defendants will become
20 privy to litigation strategy or other mental impressions protected under the work-product
21 doctrine. Of course, Plaintiffs are not required to produce responsive documents that were
22 themselves prepared by counsel “in anticipation of litigation or for trial,” such as legal
23 memoranda, notes, or communications. Defendants’ motion for reconsideration is GRANTED
24 with respect to requests GM 28/DCC 27/AAM 26 and GM 29/DCC 28/AAM 27. Plaintiffs shall
25
26
27
28

1 produce any nonprivileged documents responsive to these requests.⁵ Plaintiffs shall not refuse to
2 provide any responsive documents on the basis that their inclusion in the scope of the request
3 reveals attorney mental impressions in violation of the work-product doctrine.

4 **2. Documents Relating to Plaintiffs' Communications with Foreign Governments**

5 Defendants also seek reconsideration of the denial of the motion to compel production of
6 documents responsive to the following request: "**GM REQUEST NO. 30/DCC REQUEST**
7 **NO. 29/AAM REQUEST NO. [28]**: All DOCUMENTS relating to YOUR communications (or
8 the communications of any other automobile manufacturer or association of automobile
9 manufacturers) with any foreign government with respect to any aspect of GLOBAL
10 WARMING." Joint Statement 54:1-3.⁶ Defendants contend that this request is likely to uncover
11 evidence that the Manufacturers have sought to prevent international agreements that include
12 binding emissions limits. Plaintiffs do not dispute that the request is reasonably calculated to
13 obtain such evidence. Plaintiffs argue instead that any such evidence is irrelevant to its foreign
14 policy claims.

15 Defendants argue that Plaintiffs' success in preventing international agreements "directly
16 conflicts with" Plaintiffs' theory that the United States' official foreign policy is to negotiate to
17 secure binding international emissions agreements. Defs.' Reply 8:21-9:4. Defendants do not
18 cite authority indicating that the practicality or likelihood of success of national policy is relevant
19 to preemption of a state law. Rather, the focus of such an inquiry into the nature of national
20 policy is on its tangible expressions, such as executive agreements and statutes. See Am. Ins.
21 Ass'n v. Garamendi, 539 U.S. 396, 421 (2003) (focusing preemption inquiry on "the national
22

23 ⁵ Plaintiffs submit that their forthcoming interrogatory answers identifying all facts
24 in support of Count III makes production of such documents unnecessary. The court rejects this
25 claim on the basis that the documents themselves, apart from the facts they contain, may have
evidentiary value to Defendants and may lead to discovery of other admissible evidence.

26 ⁶ Defendants indicate that the AAM request number was incorrectly stated in the
27 Joint Statement. Mot. 6 n.2. All such mistakes identified by the parties appear with corrections
in brackets.

1 position, expressed unmistakably in the executive agreements signed by the President”); Crosby
2 v. Nat’l Foreign Trade Council, 530 U.S. 363, 375-76 (2000) (considering whether the
3 challenged state law “might . . . blunt the consequences” of actions available to the President
4 pursuant to a federal statute).

5 Defendants have not presented this court with any basis to conclude that attempts by
6 Plaintiffs to influence national policy are relevant to determining the nature or character of that
7 policy. It is not necessary, or helpful, to draw inferences from the past or potential future
8 effectiveness of various foreign policy approaches to deduce what foreign policy actually is
9 today. Whether Plaintiffs have attempted to interfere with international emissions agreements
10 does not bear on whether the current United States’ policy is to pursue such agreements. This
11 request is not reasonably calculated to lead to the discovery of admissible evidence. Defendants’
12 motion for reconsideration is DENIED with respect to request GM 30/DCC 29/AAM 28.

13 **B. Global Warming**

14 Defendants urge the court to compel Plaintiffs to produce certain documents related to the
15 science of global warming and to Plaintiffs’ knowledge of the effects of global warming.

16 **1. Relevance of Foreseeability to Dormant Commerce Clause Burden Analysis**

17 Defendants contend that their requests for global warming related documents will lead to
18 the discovery of admissible evidence that awareness of the scope of the effects of global warming
19 should have caused Plaintiffs to foresee California’s regulations. Defendants further contend that
20 the foreseeability of the regulations is relevant to determining the burden on interstate commerce
21 in the Dormant Commerce Clause analysis. The Magistrate Judge reviewed the authorities
22 Defendants presented and concluded that, with the exception of certain contractual relationships
23 not applicable here, the foreseeability of a regulation is irrelevant to Dormant Commerce Clause
24 analysis.⁷

25
26 ⁷ Defendants complain that the Magistrate Judge’s analysis was unduly focused on
27 the legal standard for relevance at trial, rather than the Rule 26(b)(1) discovery standard allowing
for discovery “reasonably calculated” to yield relevant evidence. Defendants point to the

1 By its terms, the Commerce Clause authorizes Congress to “regulate Commerce . . .
2 among the several States.” U.S. Const., art. 1, § 8, cl. 3. The Supreme Court has interpreted the
3 clause to prohibit states from unduly interfering with interstate commerce absent congressional
4 permission. See, e.g., Raymond Motor Transp., Inc. v. Rice, 434 U.S. 429, 441 (1978); Pike v.
5 Bruce Church, Inc., 397 U.S. 137, 142 (1970). The Commerce Clause does not prohibit every
6 exercise of state power that affects interstate commerce. Gravquick A/S v. Trimble Navigation
7 Int’l, 323 F.3d 1219, 1224 (9th Cir. 2003). Rather, “[i]f the law ‘regulates even-handedly to
8 effectuate a legitimate local public interest, and its effects on interstate commerce are only
9 incidental,’ then the statute must be upheld ‘unless the burden imposed on such commerce is
10 clearly excessive in relation to the putative local benefits.’” Id. (quoting Pike, 397 U.S. at 142).

11 Plaintiffs’ Dormant Commerce Clause claim does not allege that California’s regulations
12 discriminate against out-of-state interests or directly regulate interstate commerce. See
13 Brown-Forman Distillers Corp. v. N.Y. State Liquor Auth., 476 U.S. 573, 579 (1986); NCAA v.
14 Miller, 10 F.3d 633, 638 (9th Cir. 1993). Instead, Plaintiffs allege that the regulations are
15 impermissible because they burden “the production and sale of new motor vehicles” while
16 providing “no local environmental benefit, or insubstantial benefits at best.” FAC ¶¶ 135, 136.

17 In support of its contention that foreseeability of a regulation bears on the burden
18 analysis, Defendants cite Transcontinental Pipe Line v. Oil & Gas Board, 457 So. 2d 1298 (Miss.
19 1984), *rev’d on other grounds*, 474 U.S. 409 (1986). In that case, the Mississippi Supreme Court
20 evaluated whether a state rule governing natural gas was barred under the Commerce Clause
21 based on an impermissible burden on interstate commerce. Id. at 1318. A natural gas pipeline
22 operator sought to invalidate a state rule that would require it, by virtue of its contract to
23

24
25 _____
26 Magistrate Judge’s remark that the link between knowledge of global warming and anticipation
27 of greenhouse gas regulation “is entirely speculative.” Order 12:21-22. The Magistrate Judge
28 noted the speculativeness of the request only after categorically concluding that whether
Defendants foresaw or should have foreseen the regulations was irrelevant. As the court finds
that this conclusion was not contrary to law, it need not determine whether the Magistrate Judge
erred by, in the alternative, refusing the discovery request as speculative.

1 purchase gas from one supplier, to also purchase additional quantities of high-cost gas from other
2 suppliers. Id. at 1308-10. As part of its burden analysis, the court considered the burden the
3 operator faced in being forced to perform under the contract as affected by the state rule. Id. at
4 1322. The court found that the operator's burden was traceable to its contract, not to the state
5 rule. Id. Drawing on state contract law, the court held that the operator's burden stemming from
6 a freely entered contract was not grounds for invalidation under the Commerce Clause. Id. The
7 court held that the operator was chargeable with knowledge of the state rule's affect, so the
8 contract impliedly incorporated the challenged state rule. Id.

9 Defendants also cite Justice Rehnquist's dissent to the Supreme Court's opinion reversing
10 the Mississippi Supreme Court on other grounds. Transcontinental, 474 U.S. at 434-35
11 (Rehnquist, J., dissenting). The dissenting justices' discussion of foreseeability also appears to
12 hinge on contract principles. Id. The dissent cites Energy Reserves Group, Inc. v. Kansas Power
13 & Light Co., 459 U.S. 400, 434-35 (1983), for the language which Defendants cite in support of
14 their contention: "A party runs the risk of reasonably foreseeable applications of new principles
15 of state law to its activities." Energy Reserves is a Contract Clause case wherein the Court held
16 that a regulation does not impermissibly impair a contract where the complaining party should
17 have foreseen that state actions would alter the contract. Id. at 416.

18 Neither the Mississippi Supreme Court's Transcontinental opinion nor Justice
19 Rehnquist's dissent stands for a general rule that the foreseeability of government regulation is
20 relevant to Commerce Clause burden analysis. At best, they provide that the foreseeable effect of
21 a state law on a freely entered contract does not constitute an actionable burden. Neither opinion
22 implicitly or explicitly lends support to a more ambitious legal rule.

23 Defendants also ask the court to draw analogies directly from Contract Clause
24 jurisprudence. The Contract Clause provides that "[n]o State shall . . . pass any . . . Law
25 impairing the Obligation of Contracts." U.S. Const., art. I, § 16, cl. 1. Where a state law
26 operates "as a substantial impairment of a contractual relationship," the Contract Clause requires
27

1 that it “have a significant and legitimate public purpose.” Energy Reserves, 459 U.S. at 411.
2 Where the regulation was foreseeable, for instance where the subject matter of the contract is
3 highly regulated, courts are reluctant to find such an impairment. Energy Reserves, 459 U.S. at
4 415; Chrysler Corp. v. Kolosso Auto Sales, 148 F.3d 892, 894-95 (7th Cir. 1998). In Chrysler
5 Corp., Chief Judge Posner clarified that the rationale for this rule is that, to the extent the
6 regulations were foreseeable, they were taken into account in the negotiations over the terms of
7 the contract. Chrysler Corp., 148 F.3d at 894-95. It follows that in a freely negotiated agreement
8 the party bearing the burden of regulatory uncertainty has already been compensated in the form
9 of more favorable contract terms. Id. at 895. Thus, considerations of foreseeability are uniquely
10 relevant where a party had the opportunity to contract for protection against regulatory
11 uncertainty. Consequently, the court declines to extend the Contract Clause consideration of
12 foreseeability of regulations at the time of contracting to a Dormant Commerce Clause burden
13 analysis.

14 Defendants also point to a Takings Clause case where the court considered whether
15 plaintiff utilities “should have anticipated that such liability could be imposed by the federal
16 government.” Commonwealth Edison Co. v. United States, 271 F.3d 1327, 1353 (Fed. Cir.
17 2001). In Commonwealth Edison, this language appears in the context of discussion of
18 plaintiffs’ “investment-backed expectations,” which comprise part of the three-factor analysis of
19 regulatory takings. Id. at 1348 (citing Penn Cent. Transp. Co. v. New York City, 438 U.S. 104,
20 124 (1978)). “The purpose of forbidding uncompensated takings of private property for public
21 use is ‘to bar Government from forcing some people alone to bear public burdens which, in all
22 fairness and justice, should be borne by the public as a whole.’” Connolly v. Pension Benefit
23 Guar. Corp., 475 U.S. 211, 227 (1986). To this end, the Supreme Court has reasoned that “those
24 who do business in the regulated field cannot object if the legislative scheme is buttressed by
25 subsequent amendments to achieve the legislative end.” Concrete Pipe & Prods. v. Constr.
26 Laborers Pension Trust, 508 U.S. 602, 645 (1993) (quoting FHA v. The Darlington, Inc., 358

1 U.S. 84, 91 (1958)).

2 A rule barring compensation for a taking where the affected party should have expected
3 to bear the cost of the regulation is consistent with the purposes of Takings Clause jurisprudence.
4 A party who undertakes a venture, knowing that his interests might be harmed by future
5 government action, “cannot object” that he is due compensation when the predicted harm is
6 realized. Rather, the party who voluntarily took on the risk of regulation evaluated that the
7 opportunity was nonetheless sufficiently favorable. Cf. Chrysler Corp., 148 F.3d at 895. In a
8 sense, it is absurd to see the manifestation of a known risk as the equivalent of the state taking an
9 individual’s property. The value of the property had already diminished by virtue of the known
10 risk. On the other hand, one who has no reason to anticipate being harmed by regulation, is more
11 properly characterized as having been forced “to bear public burdens.” Connolly, 475 U.S. at
12 227.

13 No analogy to the Contract Clause or Takings Clause cases emerges in this case. The
14 Dormant Commerce Clause analysis does not call for the court to consider the culpable lack of
15 foresight of those who shoulder the burden of state regulation. It instead requires the court to
16 undertake a “delicate adjustment” of the national interests expressed by the Commerce Clause
17 and “sensitive consideration of the weight and nature of the state regulatory concern.” Raymond,
18 434 U.S. at 440-41. The difficult balancing of interests that Dormant Commerce Clause analysis
19 requires does not permit the court to assign blame to particular actors for failure to respond to a
20 foreseeable risk. Defendants urge that common sense dictates that “the magnitude of an alleged
21 ‘burden’ is inversely related to the head start one has in tackling the burden.” Mot. 14:14-16.
22 This is only true from the perspective of someone who has time remaining to “tackl[e] the
23 burden.” Whether or not the Manufacturers knew in the past that these regulations would be
24 implemented, the time for them to have acted on this foresight has passed. In any event, what is
25 relevant to a Commerce Clause analysis is the burden Plaintiffs now face because of the
26 regulations, which can be evaluated straightforwardly by determining what they must do to
27

1 comply. Accordingly, no requested document is discoverable solely because it may yield
2 admissible evidence that the Manufacturers should have foreseen the challenged regulations.

3 **2. Relevance of Global Warming Science to Dormant Commerce Clause Benefits Analysis**

4 Defendants contend that documents related to global warming science are relevant to
5 deciding the benefits of the regulations on a Dormant Commerce Clause challenge.⁸ The
6 Magistrate Judge did not address the merits of this position in the context of his Dormant
7 Commerce Clause analysis. The court will therefore address this issue de novo.

8 The balancing of state and national interest in a Dormant Commerce Clause challenge
9 entails “consideration of the weight and nature of the state regulatory concern.” Raymond, 434
10 U.S. at 441. The more substantial the benefit of the state regulation, the greater the burden it may
11 impose on interstate commerce. See Pike, 397 U.S. at 145 (“But the State’s tenuous interest in
12 having the company’s cantaloupes identified as originating in Arizona cannot constitutionally
13 justify the requirement that the company build and operate an unneeded \$ 200,000 packing plant
14 in the State.”); Raymond, 434 U.S. at 444-45 (considering state regulation’s limited advantage
15 for public safety in finding a Dormant Commerce Clause violation). Accordingly, a disputed
16 factual issue in this case is “the regulation’s environmental benefits and specifically its impacts
17 on global warming.” Joint Statement 4:10.

18 Plaintiffs argue that all Defendants need to know about global warming has been filed in
19 their expert reports. In support, Plaintiffs point to uncontested facts establishing CARB staff has
20 stated that the regulations’ “contribution to a reduction in global warming . . . will be small” and
21 stated that “greenhouse gas emissions from California light duty vehicles are a small fraction of
22 the global total.” Scheduling Conference Order 11:5-10. Plaintiffs also point out CARB’s
23

24 ⁸ Defendants also argue that documents related to global warming science are
25 relevant to issue under the Clean Air Act claim of whether the regulations are entitled to an EPA
26 waiver under 42 U.S.C. § 7543(b). As the request for documents related to global warming
27 science is relevant to deciding the benefits of the regulation under the Dormant Commerce
28 Clause, the court need not decide whether such a request is, in the alternative, likely to lead to the
discovery of evidence relevant to the Clean Air Act claim.

1 admissions that the regulations' effects on climate can only be quantified using computer models.
2 Opp'n 13:16-19. Plaintiffs contend that the regulation has merely a "symbolic" connection with
3 global warning based on "an imaginary scientific hypothesis that does not exist in the real
4 world." Id. at 13:6-19. It follows, Plaintiffs argue, that such a theoretical inquiry is properly a
5 matter of expert opinion only.

6 It appears that Plaintiffs are asking the court, in the context of a discovery dispute, to
7 conclude that any decrease in temperature that is "small" or that cannot be measured through
8 traditional meteorological methods is the same as any other temperature change that shares those
9 characteristics. Undoubtedly, Defendants will argue that the regulations' effects on temperature,
10 even if small or immeasurable by conventional methods, will "effectuate a legitimate local public
11 interest" of California. See Gravquick, 323 F.3d at 1224. In fact, such a finding is presumably
12 what led CARB to enact the regulations in the first place. It is not self-evident that the
13 magnitude of a climate change is irrelevant simply by virtue of its being small and not
14 measurable by conventional methods. It could very well be the case that a small, immeasurable
15 climate change could reap benefits where an even smaller change would not.⁹

16 Defendants contend that Plaintiffs are broadly contesting published global warming
17 science. Defendants point to Plaintiffs' Expert Report of Thomas C. Austin as an example. See
18

19 ⁹ On September 5, 2006, Plaintiffs filed an ex parte application for permission to
20 file a proffer of new testimony in opposition to Defendants' request for reconsideration. The
21 court hereby GRANTS the ex parte application. The testimony proffered comes from the
22 deposition of Charles Shulock, CARB's Program Manager for Motor Vehicle Greenhouse Gas
23 Reduction. Shulock concedes (1) that CARB was unable, through any means available to it, to
24 determine whether the California regulations would lead to any real world impact; (2) that it was
25 possible that no human being would notice the impact; (3) that CARB had not quantified the
26 impact on sea level, spring runoff, snowpack, or timetable for spring blooms; (4) that he did not
27 believe the regulations would cause the temperature to drop a quarter of a degree or more; and
28 (5) that CARB has not attempted to quantify the regulations' total impact on average
temperatures in California. Pls.' Proffer of New Test. 2:9-4:10. These concessions do not permit
the court to decide, at this early stage, that discovery regarding global warming science will not
lead to admissible evidence. The court has no basis to conclude that a regulation resulting in a
climate change in California has no benefit merely because CARB cannot predict how much the
change will be or what impacts it will have and because human beings cannot measure or feel the
change.

1 Joint Statement Ex. H (“Austin Report”). Before extrapolating the temperature change the
2 regulations will make, Austin expresses his uncertainty about whether a correlation between
3 greenhouse gas emissions and future temperature increases even exists. Austin Report 59. He
4 notes that there are many other factors affecting greenhouse gas concentrations and temperature:

- 5 • greenhouse gas emissions contribute to increased growth of plants, which remove
6 carbon dioxide from the atmosphere,
- 7 • changes that humans make to the surface of the Earth increase or decrease the
8 amount of light reflected back into space, which may increase or decrease
9 warming, and
- 10 • changes in solar activity and the Earth’s orbit around the Sun can affect the
11 Earth’s climate and cause significant cooling.

12 Id. He concludes from these predictions that “rising greenhouse gas concentrations may not be
13 sufficient to offset the cooling effect.” Id. He also notes that there is “considerable uncertainty”
14 as to the degree to which certain feedback effects of warming, such as increased low-level cloud
15 cover, will cool the climate. Id. at 59-60.

16 Defendants intend to oppose Plaintiffs’ Dormant Commerce Clause claim by arguing that
17 the local benefits of the regulation justify its burden on interstate commerce. Demonstrating
18 local benefits appears to turn on Defendants establishing (1) that temperatures will rise in the
19 future in the absence of the regulations, (2) that rising temperatures will harm California, and (3)
20 that the regulations will decrease such harm by slowing the temperature increase. Testimony by
21 Austin to the effect that rising greenhouse gas concentration may not offset other cooling effects
22 would directly undermine the first and third premises of that argument.

23 Austin’s opinion rebuts Defendants’ first premise because it tends to establish that there
24 is a real chance that temperatures will not rise in the future. The probability that temperatures
25 will stay the same or decrease in the absence of the regulations is inversely related to the local
26 benefits of the regulation. This is because a regulation that aims to prevent a harmful eventuality

1 that is likely to materialize can succeed in outweighing its burden on interstate commerce where
2 a regulation ameliorating a less probable undesirable occurrence would fail. Compare Raymond,
3 434 U.S. at 444 (striking down a state highway regulation under the Dormant Commerce Clause
4 based on failure to show an “appreciable threat” in its absence), with S.C. State Highway Dep’t
5 v. Barnwell Bros., Inc., 303 U.S. 177, 196 (1938) (upholding state vehicle regulation that
6 ameliorated a condition responsible for “increased hazard”).

7 Austin’s opinion also provides a basis to question Defendants’ third premise. He states
8 that increased plant growth may reduce carbon dioxide levels and that other human activities may
9 stimulate warming. These propositions tend to show that the regulations may not succeed in
10 preventing rising temperatures, should they occur. To the extent that carbon dioxide emissions
11 stimulate plant growth, they may not result in a net increase in greenhouse gas accumulations.
12 Likewise, if changes to the surface of the Earth are the controlling cause of warming, decreases
13 in automobile emissions may be ineffectual in decreasing warming.

14 Austin’s report contains contentions that, if accepted by the trier of fact, diminish the
15 purported benefits of the challenged regulations. Accordingly, the court concludes that it is
16 likely that the merits of global warming science will be in dispute in this case.

17 To rebut Defendants’ objection that not being able to discover documents regarding
18 global warming science will limit their ability to prepare a defense, Plaintiffs point out the
19 availability of a large volume of publicly available literature on the science of global warming.
20 They claim that this availability counsels against permitting the discovery Defendants seek. The
21 court is unaware of, and Plaintiffs do not cite, authority for refusing requests for documents
22 reasonably calculated to discover relevant evidence on the basis that the documents are publicly
23 available. To the contrary, “[t]here is, strictly speaking, no relevance question that arises merely
24 because the discovering party already knows or has access to the information it seeks to discover.
25 Relevance is inherent in the content of the information, not in who possesses or has access to it.”
26 6 James Wm. Moore et al., Moore’s Federal Practice §26.41[13] (3d ed. 2006); Weiner v. Bache

1 Halsey Stuart, Inc., 76 F.R.D. 624, 625 (S.D. Fla. 1977) (whether requesting party was already in
2 possession of the document it sought was immaterial to relevance under the Federal Rules).
3 Plaintiffs do not complain that Defendants have requested these documents for an improper
4 purpose, such as to harass them. See Hendler v. United States, 952 F.2d 1364, 1380 (Fed. Cir.
5 1991) (reversing dismissal for plaintiff's failure to respond to interrogatories seeking information
6 defendants already possessed and which was obviously difficult for plaintiff to obtain). Nor do
7 Plaintiffs contend that obtaining these documents from the public domain is "more convenient,
8 less burdensome, or less expensive" or explain why "the burden or expense of the proposed
9 discovery outweighs its likely benefit." See Fed. R. Civ. P. 26(b)(2). In any event, it is not a
10 prerequisite to a granting a discovery request that the requesting party will otherwise suffer
11 hardship.

12 Plaintiffs take odds with some of Defendants' particular requests regarding global
13 warming science. Defendants seek certain documents concerning effects of the challenged
14 regulations.¹⁰ See Joint Statement 40:11-15. Plaintiffs admit that this request "does in fact
15 pertain to a relevant issue." Id. at 41:16-17. They argue, nonetheless, that the request should not
16 extend to Plaintiffs' "rank-and-file" employees "regardless of their status as experts." Id. at
17 41:17-25. Plaintiffs' do not specify what they mean by "rank-and-file" employees. In its
18 response to this request, GM agreed to make available "final management reports and
19 presentations and other materials responsive to the request." Id. at 40:19-20. To the extent
20

21 ¹⁰ The request, in its entirety, reads as follows:

22 **GM REQUEST NO. 22/DCC [REQUEST NO. 21/AAM**
23 **REQUEST NO. 20]:** All DOCUMENTS relating to the effect of
24 the GHG EMISSIONS reductions required by the GHG
25 REGULATIONS (including the reductions required by the GHG
26 REGULATIONS in each ADOPTING STATE, separately or
cumulatively) on (a) atmospheric concentrations of greenhouse
gases; (b) temperature and/or (c) GLOBAL WARMING impacts or
risks of GLOBAL WARMING impacts.

27 Joint Statement 40:11-15.

1 Plaintiffs are asking the court to restrict responses to this request to certain reports and
2 presentations that have been internally compiled, their request is unreasonable. Nor does it
3 make sense to restrict the scope of this discovery to the documents their experts have reviewed.
4 Either of these approaches would allow Plaintiffs to avoid producing certain stray documents
5 that, though relevant, would not be the subject of a report or presentation or be delivered to an
6 expert preparing for litigation. Plaintiffs have not proposed any other reasonable restriction on
7 the breadth of the request. Accordingly, Defendants' motion for reconsideration is GRANTED
8 with respect to this request. Plaintiffs shall produce all documents responsive to request GM
9 22/DCC 21/AAM 20.

10 Plaintiffs also specifically object to the request that they produce documents regarding the
11 efficacy of greenhouse gas regulations other than the regulations challenged in this case.¹¹ See
12 Joint Statement 42:1-4. Plaintiffs contend that because the benefits of the challenged regulations
13 are admittedly not "identifiable," the effects of other regulations are irrelevant. Opp'n at 16:6.
14 Again, Plaintiffs appear to be conflating the concept of the effects of a regulation being
15 meteorologically measurable with the concept of the regulation mitigating the impacts of global
16 warming. Defendants have not conceded that the challenged regulations will be ineffectual. This
17 request seeks information about regulations imposed on a greater scale, such as the United States
18 and other countries, and about the cumulative effect of those regulations. To the extent this
19 information reveals that past restrictions on carbon dioxide emissions have ameliorated the
20

21 ¹¹ The request, in its entirety, reads as follows:

22 **GM REQUEST NO. [23]/[DCC] REQUEST NO. [22/AAM**
23 **REQUEST NO. 21]:** All DOCUMENTS relating to the effect of
24 any GHG EMISSIONS reductions or limits proposed or
25 implemented by any state, country (including the United States), or
26 group of countries, separately or cumulatively, on (a) atmospheric
concentrations of greenhouse gases; (b) temperature; and/or (c)
GLOBAL WARMING impacts or risks of GLOBAL WARMING
impacts.

27 Joint Statement 42:1-4.

1 effects of global warming, it tends to show that the regulations at issue here will also have such
2 an effect. Accordingly, Plaintiffs shall produce all documents responsive to request GM 23/DCC
3 22/AAM 21, whether or not they are publicly available.

4 Plaintiffs object to Defendants' request for documents related to the filing of annual
5 reports with the United States Department of Energy ("DOE") regarding carbon dioxide
6 emissions from manufacturing facilities.¹² Joint Statement 43:18-20. Plaintiffs agree to produce
7 the reports themselves, but refuse to produce any other related documents. Opp'n 16:13-21.
8 Defendants contend that the documents related to the reports but not submitted to the DOE are
9 likely to contain Defendants' reasons for reducing emissions and the effects of emissions
10 reductions. Plaintiffs do not deny that the request is likely to yield such documents. Plaintiffs
11 argue only that "one struggles to understand" how documents concerning manufacturing
12 facilities, which are "stationary sources" of carbon dioxide, are relevant to this case, concerning
13 vehicle emissions. Opp'n 16:13-17. The documents that Defendants claim this request will
14 yield, those regarding the benefits of reducing greenhouse gases, are relevant to determining
15 whether the challenged regulations, by reducing emissions, will result in a legitimate local
16 benefit under the Dormant Commerce Clause. There is no reason to conclude at this stage that
17 the warming effects of greenhouse gases emitted from stationary sources, and the associated
18 benefits of reducing such emissions, so differ from the effects of emissions from motor vehicles
19 as to justify denying this discovery on a relevance ground. Accordingly, Defendants' motion for
20 reconsideration is GRANTED with respect to request GM 25/DCC 24. Defendants shall produce
21 all responsive documents, including those that were not submitted to the DOE.

22
23 ¹² The request provides, in full, as follows:

24 **GM REQUEST NO. 25/DCC REQUEST NO. 24:** All
25 DOCUMENTS relating to YOUR submission of annual reports to
26 the United States Department of Energy reporting the amount of
carbon dioxide emissions avoided or sequestered from YOUR
MOTOR VEHICLE manufacturing facilities.

27 Joint Statement 43:18-20.

1 In response to Defendants' request for documents relating to "abrupt climate change"¹³
 2 (see Joint Statement 45:1-3), Plaintiffs agree to produce only "any original research of their own
 3 on this issue." Opp'n 16:26-27. Such a limitation appears to exclude relevant documents from
 4 the scope of the request. For instance, Plaintiffs' internal communications about the merits of
 5 research performed by third parties could be relevant to the Dormant Commerce Clause Claim.
 6 A statement of a Plaintiff recognizing the environmental harm presented by Plaintiffs' products
 7 would be especially trustworthy, given that there would be diminished motive to fabricate such a
 8 statement. Cf. People v. Chapman, 50 Cal. App. 3d 872, 879 (1975) (recognizing the
 9 trustworthiness of a statement against the declarant's interest where a "reasonable man in
 10 [declarant's] position would not have made the statement unless he believed it to be true"). Nor,
 11 as discussed above, does the availability to Defendants of any of the global warming science bear
 12 on the permissibility of discovery. See Weiner, 76 F.R.D. at 625. Accordingly, Defendants'
 13 motion for reconsideration is GRANTED with respect to request GM 26/DCC 25/AAM 24.
 14 Plaintiffs shall produce all documents responsive to request.

15 In their opposition, Plaintiffs do not specifically address the merits of several of
 16 Defendants' document requests regarding the causes of global warming (GM-DCC-AAM 8 and
 17 9), the impacts of global warming (GM-DCC-AAM 10 and 11), and Plaintiffs' SEC disclosures
 18 on global warming (GM 20/DCC-AAM 19). Plaintiffs appear to rely on their arguments that
 19 documents concerning global warming science, other than the contents of their experts' reports,
 20 are categorically irrelevant and that Defendants should not be allowed to discover publicly
 21 available documents. For the reasons mentioned above, Defendants' motion for reconsideration
 22

23 ¹³ The request provides, in full, as follows:

24 **GM REQUEST NO. 26/DCC REQUEST NO. 25/AAM**
 25 **REQUEST NO. 24:** All DOCUMENTS relating to abrupt climate
 26 change, including but not limited to DOCUMENTS relating to
 thresholds of GHG concentrations or of temperature beyond which
 a GLOBAL WARMING impact occurs rapidly.

27 Joint Statement 45:1-3.

1 is GRANTED with respect to these requests. Plaintiffs shall produce all documents responsive
2 to requests GM-DCC-AAM 8, 9, 10 and 11, and request GM 20/DCC-AAM 19.

3 With respect to the document requests that Defendants characterize as relating to “the
4 vehicle manufacturers’ past and present activities challenging and questioning the science of
5 global warming” (Mot. 8:24-25), Plaintiffs have successfully argued that they are not relevant to
6 the Dormant Commerce Clause burden analysis, as discussed above. Plaintiffs neglect, however,
7 to rebut in their opposition Defendants’ contention that these documents, to the extent they
8 discuss the science of global warming, are relevant to the Dormant Commerce Clause benefit
9 analysis. With respect to two of these requests, GM-DCC-AAM 13 and GM 16/DCC-AAM 15,
10 the Manufacturers state that they have conducted a “reasonably diligent search” and “located no
11 responsive non-privileged documents.” Joint Statement 31:10-20, 37:16-38:2. The
12 Manufacturers have effectively certified that, “to the best of the signer’s knowledge, information,
13 and belief,” the response is given for a proper purpose, not simply to prevent Defendants from
14 receiving discovery material. Fed. R. Civ. P. 26(g)(2). The attorney’s signature on a discovery
15 response “signals that the attorney has made a reasonable effort to assure that the client has
16 provided a truthful response—e.g., that all available documents are . . . furnished in response to
17 discovery requests.” 6 James Wm. Moore et al., Moore’s Federal Practice §26.154[2][a] (3d ed.
18 2006). Failure to comply with this directive results in mandatory sanctions. Fed. R. Civ. P.
19 26(g)(3). The record currently before the court does not demonstrate that the Manufacturers’
20 representations are untrue. Defendants’ motion for reconsideration is DENIED with respect to
21 GM-DCC-AAM 13 and GM 16/DCC-AAM 15.

22 Defendants’ request 14 to GM seeks documents “relating to both Global Warming and to
23 Tech Central Station including” their communications and documents relating to their
24 relationship. Joint Statement 34:1-4. Plaintiffs contend that Defendants seek irrelevant
25 documents concerning what the Manufacturers knew about global warming to use to embarrass
26 Plaintiffs into dropping this litigation. This request potentially seeks relevant documents
27

1 concerning communications regarding the science of global warming. However,
2 communications concerning, for example, the politics of or public opinion regarding global
3 warming and that do not discuss the science of global warming are not likely to be relevant to the
4 benefit analysis. Nor does it appear documents that concern GM's relationship with Tech
5 Central Station and that do not discuss the science of global warming are relevant. Defendants
6 have not explained how documents not discussing global warming science are likely to lead to
7 the discovery of admissible evidence. Defendants' motion for reconsideration is GRANTED in
8 part and DENIED in part with respect to request GM 14. GM shall only produce documents
9 responsive to request 14 that relate to any aspect of the science of global warming, such as the
10 causes of global warming, the effects of global warming, the effects of greenhouse gas emissions
11 or greenhouse gas concentrations on global warming, and the effect on global warming of
12 reductions in greenhouse gas emissions pursuant to government regulations or otherwise.

13 Defendants also request documents relating to a list of 18 individuals and to global
14 warming, including the Manufacturers' relationship with or communications with the individuals
15 and any automobile manufacturers' payments to the individuals.¹⁴ Joint Statement 35:1-9. As

16
17 ¹⁴ The request provides, in full, as follows:

18 **GM REQUEST NO. 15/DCC-AAM REQUEST NO.14:** All
19 DOCUMENTS relating to both GLOBAL WARMING and to any
20 of the following individuals: S. Fred Singer, James Glassman,
21 David Legates, Richard Lindzen, Patrick J. Michaels, Thomas Gale
22 Moore, Robert C. Balling, Jr., Sherwood B. Idso, Craig D. Idso,
23 Keith E. Idso, Sallie Baliunas, Paul Reiter, Chris Homer, Ross
24 McKittrick, Julian Morris, Frederick Seitz, Willie Soon, and Steven
25 Milloy, including but not limited to:

26 a. All DOCUMENTS relating to any communications between
27 YOU and these individuals, and

28 b. All DOCUMENTS relating to YOUR relationship (or the
relationship of any automobile manufacturer or association of
automobile manufacturers) with any of them, including but not
limited to payments directly or indirectly from YOU or any other
automobile manufacturer or association of automobile
manufacturer to any of them.

1 with the Tech Station request, this request is likely to lead to the discovery of admissible
2 evidence regarding the science of global warming that is relevant to the Dormant Commerce
3 Clause claim. It also encompasses a variety of documents concerning communications or aspects
4 of the individuals' relationship to the Manufacturers that are irrelevant. The Federal Rules
5 require Plaintiffs to disclose "the compensation to be paid for the study and testimony" of any
6 witness who will provide expert testimony. See Fed. R. Civ. P. 26(a)(2)(B). Defendants do not
7 explain how documents concerning any other payments are relevant. Defendants' motion for
8 reconsideration is GRANTED in part and DENIED in part with respect to request GM 15/DCC-
9 AAM 14. The Manufacturers shall only produce documents responsive to this request that relate
10 to any aspect of the science of global warming.

11 **CONCLUSION AND ORDER**

12 Accordingly, for the reasons stated in the above Memorandum Opinion, IT IS HEREBY
13 ORDERED that:

- 14 1. Defendants' motion for RECONSIDERATION of the Magistrate Judge's order
15 denying the motion to compel is DENIED with respect to requests GM-DCC-
16 AAM 13, GM 16/DCC-AAM 15, and GM 30/DCC 29/AAM 28;
- 17 2. Defendants' motion for RECONSIDERATION is GRANTED with respect to
18 requests GM-DCC-AAM 8, 9, 10 and 11, GM 20/DCC-AAM 19, GM 22/DCC
19 21/AAM 20, GM 23/DCC 22/AAM 21, GM 25/DCC 24, GM 26/DCC 25/AAM
20 24, GM 28/DCC 27/AAM 26, and GM 29/DCC 28/AAM 27; and

21 //

22 //

23 //

24 //

25 //

26 _____
27 Joint Statement 35:1-9.

1 3. Defendants' motion for RECONSIDERATION is GRANTED in part and
2 DENIED in part with respect to requests GM 14 and GM 15/DCC-AAM 14. The
3 Manufacturers shall produce all documents responsive to requests GM 14 and GM
4 15/DCC-AAM 14 that discuss any aspect of the science of global warming.
5

6 IT IS SO ORDERED.
